Comp 170 – Assignment (Midpoint deliverables)

Report progress on your custom programming work.

The assignment will help you see where you are in completing the custom project. By now there should be a good structure, a breakdown of the project into key parts, and a solid view of user / file system interactions. This assignment summarized that information.

Prepare a report including these item:

1. Changes in project requirements – things dropped or added (if no changes, say so).
2. Overall structure of the program. What are the methods that will do most of the work? Include or attach a .java file showing the full signature of most or all the methods you will use. Include all information on parameters, types, return values. Include pseudo code for each method that explains what it does.
3. What are the key pieces of data your program will use? How will you define the variables and types needed? You can include in the same .java file or list separately.
4. Questions or problems you are facing right?

Suggestion: if these questions are troublesome and you're not clear how to answer, it's time to seek help from instructors, class helpers, etc. Time files!

What to turn in:

Turn in the completed outline above. One person turn in for a team.
